Summary

I am an aspiring Full-Stack Developer and Bachelor of IT (Hons) student with a strong interest in building modern, scalable, and user-focused web applications. I have hands-on experience working with technologies such as JavaScript, React, Vite, Tailwind CSS, Node.js, Express, MongoDB, and Django.

I enjoy turning ideas into functional products and pay close attention to both technical implementation and user experience. I am particularly interested in frontend development, UI/UX, responsive design, and creating polished interfaces that feel professional and intuitive.

Through my projects, I have developed a practical approach to problem-solving—learning new technologies, debugging issues, improving existing implementations, and continuously refining my work. I am currently focused on strengthening my full-stack development skills and growing into a professional software developer who can contribute effectively to real-world projects.

My goal is not simply to write code, but to understand the problems behind the code and build solutions that are reliable, maintainable, and valuable to users.

Education

Jan, 2025 - Current
Kathmandu, Nepal

● **Bachelor of Information Technology (Hons) / Information Technology**
Texas College of Management & IT
Undergraduate

Projects

Aug, 2026

● **CULTURE444 – Full-Stack E-Commerce Platform**

 <https://github.com/rohitkumarkhadka22/Culture444.git>

A full-stack e-commerce platform designed to provide a complete online shopping experience, including product browsing, categories, product details, user authentication, shopping cart, wishlist, checkout, and order management. I worked on the frontend and backend, integrating a responsive user interface with REST APIs and database functionality. The project helped me strengthen my skills in React, JavaScript, Node.js, Express.js, MongoDB, authentication, API integration, and responsive web development.
