What it does

The one-paragraph explainer for the hero section.

Snaproll turns any event — a wedding, birthday, trip, party — into a shared disposable camera. The host sets it up in the app and gets a QR code; guests scan it, pick a name, and start shooting with the event's chosen film-style filters, no download-and-sign-up friction for guests. Every photo drops into one shared pool for the event and stays hidden from everyone — including the person who took it — until the host's chosen reveal moment, just like waiting for a roll of film to come back from the lab.

Position it as: *"the disposable camera you leave on the table, minus the film run and the wait at the drugstore — except the surprise reveal stays intact."*

shot 02 / 09

How it works

A 5-step flow — good as a scroll section with one illustration per step.

01

Host creates a roll

Name the event,
set an end date,
choose filters,
set the shot &
guest limits.

02

Share the QR code

The app
generates a QR
design guests
scan — printed,
projected, or
sent as a link.

03

Guests jump in

Scan the code
(or type it), enter
a display name.
No account, no
app-store
detour required
to join.

04

Everyone shoots

Guests shoot
from the event's
shared filter set
and shot pool.

05

The roll is revealed

Photos stay
hidden until the
host's reveal
moment: during
the event, right
after it ends, or
a scheduled
time.

Filters

The site can show these as a swatch strip — hosts pick which ones are on for their event.

FILTER	FEEL
Normal	True to life — always available, can't be turned off
Vintage	Warm, faded, old-print colour cast
Black & White	Classic monochrome
Dreamy	Soft bloom / glow pass over the shot
Nostalgic	Film-grain texture layered on top
Cool	Blue-leaning, crisp colour grade
Grainy	Rough, high-texture disposable-camera look

shot 04 / 09

Event setup, in numbers

Useful as a "what you control" feature list — these are host-side settings inside the app, shown here so the copy on the site is accurate.

SETTING	OPTIONS
Guests / participants	5 · 10 · 15 · 20 · 25 · custom number
Shots (total photos for the event)	20 · 35 · 50 · 100 · 200 · unlimited
Reveal timing	during the event · right after it ends · scheduled date & time
Filters enabled	host picks any combination of the 7 above

shot 05 / 09

In-app features to mention

Lives in the app's profile screen — good as a "the little things" strip on the site, not a working feature on the web itself.

Light & dark mode

A manual in-app switch, independent of the phone's system setting.

5 languages

The interface is fully translated, not just labels.

Delete account

A host can permanently delete their profile and data from within the app.

No guest account needed

Guests only ever need a display name to join and shoot.

Pricing

Current state, so the site doesn't promise anything that isn't built.

Free

Snaproll has no in-app purchases or paid tiers right now. Keep the pricing section on the site to a single "it's free" line rather than a comparison table — a tiered pricing block should only go up once paid plans actually exist.

FAQ

Draft copy for an FAQ accordion — edit freely, but keep the "no account for guests" point front and centre, it's the thing people ask first.

Do guests need to create an account? -

No. Guests scan the event's QR code, type in a display name, and start shooting — no sign-up, no password, no app-store detour required.

Do I need to download the app to join an event? +

When do we get to see the photos? +

What filters can I use? +

Is there a limit on guests or photos? +

Is Snaproll free? +

Can I delete my account and data? +

What languages is the app available in? +

Is Snaproll available on iOS and Android? +

Download

Two store badges, linking straight out — that's the entire "conversion" job of this site.

App Store

Google Play

Swap these for the real store badge assets and links once the listings are live — placeholders shown here.

shot 09 / 09

Footer

A working mock of the footer content — no functional links needed on the site beyond store badges and legal pages.
